

This upgrade file is applicable to all models of NSFOCUS WAF NX3/NX5 series (WAF V6.0.6.1).

[Source Version]

V6061.37352

[Version Changes]

1. Base64 decoding is added.
2. The Absorb Star 3.0 engine is integrated.
3. Protection rules and the illegal download protection policy are optimized.
4. A false positive analysis function is added to enable the device to adjust policies according to the analysis result.
5. ESPC V7 can be used as a centralized management platform for unified management of WAF devices.
6. The HTTPS cryptographic algorithm is supported.
7. HTTPS website protection is added for WAF in mirroring mode.
8. Out-of-path deployment is allowed for vWAF to support interconnection with mainstream cloud platforms.
9. The vWAF license is reclassified according to the processing capability.

[Upgrade Notes]

1. Limited by low performance of hardware platforms, 100M series of devices (NX3-P100A, NX3-P300A, and NX3-P600A), after being upgraded to V6.0.7.0, may work improperly due to high CPU usage. Therefore, such upgrade is not recommended.
2. Check whether the current system version is V6.0.6.1.37352 or later.
Click **Upgrade** in the quick access bar. If the upgrade result is **Succeeded** for the upgrade package of V6.0.6.1.37352, proceed to the next step.
3. Upload the V6.0.7.0.39230 upgrade package. During the installation, a progress bar is displayed. The upgrade package size is about 75 MB and takes about 2 minutes to install.
4. After the installation is complete, check the upgrade record to see whether the upgrade is successful.
5. If the system prompts an upgrade failure immediately after the upgrade package is uploaded, that is probably because the current hardware platform or device model does not support upgrade to the V6.0.7.0 system.
6. After the installation is complete, restart the device.
