

Web Application Firewall (WAF)

NEXT GEN TECH TO STOP NEXT GEN ATTACKS

OVERVIEW

Attacks on web applications and servers are more complex and frequent than ever. Organizations continue to suffer costly data breaches using WAFs that still rely on signatures and pattern matching as their primary defenses; technologies that are easily evaded. And moving applications to the cloud does not make them any safer.

The NSFOCUS WAF uses next-generation technologies to provide comprehensive application layer security, eliminating these problems and completely protecting your critical web applications. With full out-of-the-box protection against the OWASP Top Ten, the WAF is specifically engineered to protect not just web applications, but their underlying infrastructure, plug-ins, protocols, and more.

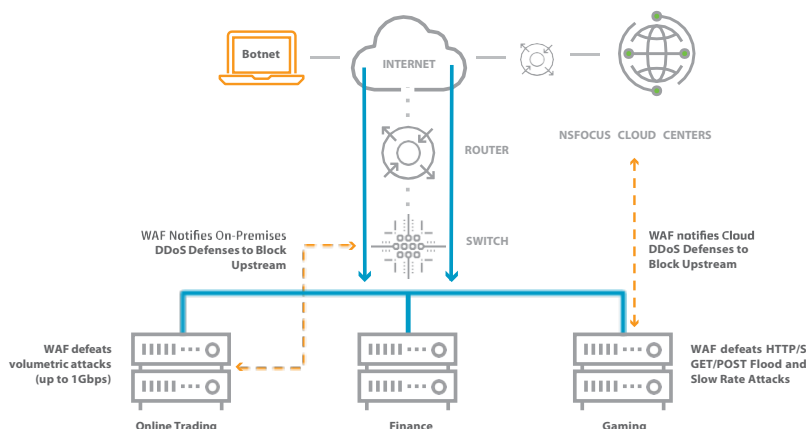

ADVANCED, INNOVATIVE TECHNOLOGY

The NSFOCUS WAF technology is powered by an internationally-recognized research lab and developed with over 10 years of experience protecting the world's largest banks, telecommunications, gaming, and social media companies. The WAF uses Intelligent Detection™ advanced semantic analysis and machine learning technology that is far superior for identifying web attacks and minimizing false positives/negatives than traditional positive and negative security models to deliver next-gen real-time web security.

SQLi	False Negative (based on 7442 payloads)	False Positive (based on 1458625 payloads)
Intelligent Detection	0.026874%	0.000745%
Signature-based Detection	0.604676%	0.342720%

COMPREHENSIVE, MULTI-LAYER SECURITY

The WAF serves as an essential part of a multi-layer security strategy by providing advanced inspection and specialized security for the web application layer. It also includes up to 1 Gbps of DDoS protection from volumetric layer 7 attacks, including TCP floods and HTTP/S GET/POST floods. When deployed together with higher capacity NSFOCUS on-premises or cloud Anti-DDoS Defenses, the WAF can direct traffic flows in real-time to the ADS to keep your servers running under the most extreme DDoS attacks.

KEY BENEFITS

- Eliminate costly data breaches
- Reduce false positives to ensure business continuity
- Simplify PCI compliance efforts

KEY FEATURES

Semantic analysis engine

Semantic analysis and contextual logic-based attack detection to identify unknown threats and minimize false positive and false negative

Leading Platform Adaptability

Flexible deployment on mainstream cloud platforms such as AliCloud, AWS, Microsoft Azure (China), and Tencent; Microservice protection for applications in cloud-native architecture and platforms

Hybrid management and solution

Open API configuration; on-premises and cloud management through a centralized management platform; Integration with NSFOCUS on-premises & cloud DDoS solutions for ensuring performance during the largest DDoS attacks

Optional product form

Capable to provide both hardware appliances and virtual product

CLOUD-NATIVE SECURITY

The widespread adoption of cloud-native architecture has made it easier than ever to build, deploy and scale applications in the cloud. NSFOCUS Cloud-native WAF provides a lightweight method to protect each micro-service with specific policies accurately.

WEB SECURITY MADE SMART AND SIMPLE

The NSFOCUS WAF is the ideal solution for safeguarding your critical web infrastructure whether on-prem or in the cloud. With Intelligent Detection, Smart Patch, Threat Intelligence, and Anti-DDoS System, the WAF delivers high-quality application layer security for organizations of any size.

SOFTWARE SPECIFICATIONS

Security Analysis

- » Intelligent Detection™ next-gen advanced machine learning for lower false positive/negative rates identifying web attacks
- » Automated False Positive Behavioral Analysis
- » Positive behavior-based protection model with enhanced dynamic profile learning and whitelist security
- » Negative signature-based model

Application Attack Prevention

- » OWASP Top 10 including Cross-site Scripting (XSS), Cross-Site Request Forgery (CSRF), Command & SQL Injection, Remote File Inclusion (RFI), Web Page Defacement, Malicious Scanning, Botnet Protection, XML Attack Protection, and HSTS

Virtual Machine & Cloud Support

- » VMware, KVM, Xen, Hyper-V
- » AliCloud, AWS, Microsoft Azure (China), HUAWEI, Tencent, ZTE, Wo Cloud, Softbank (Japan), OpenStack

Web Server and Network Security

- » Web server and app plug-in vulnerability modules, Layer 4 ACL, and ARP spoofing protection

Anti-DDoS

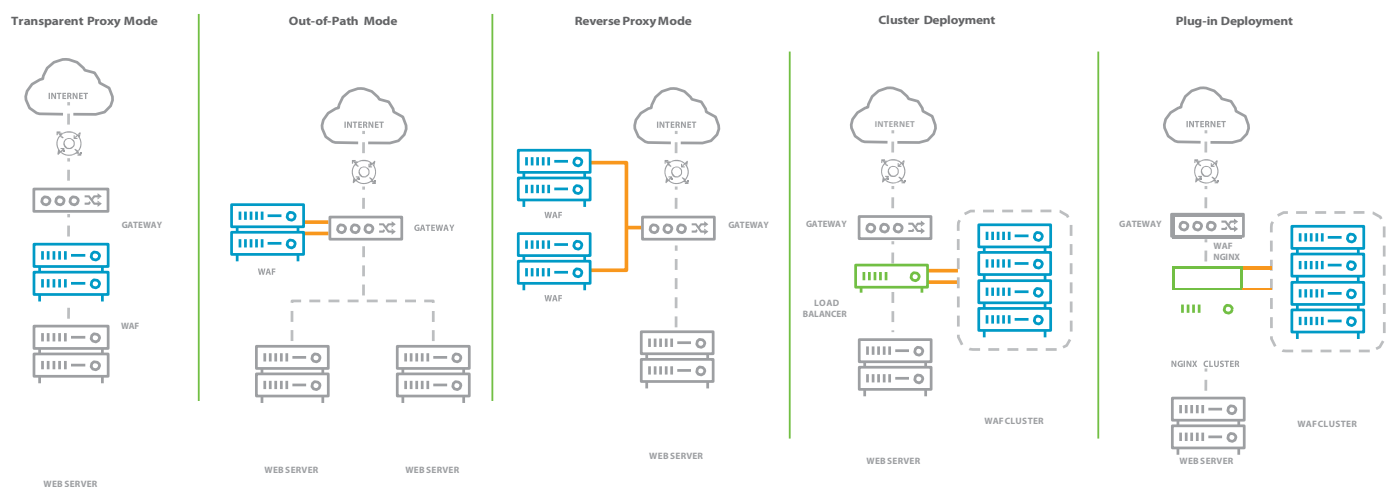

- » TCP flood, HTTP/S GET/POST floods (up to 1Gbps), low-and-slow attacks, brute force Certification
- » Compliance reporting and support for PCI DSS 3.2
- » Veracode VL4 certified

High Availability Configuration

- » Active/active; active/passive; VRRP
- » Internal "software" bypass to pass traffic without inspection (HW appliance)
- » Fail-open hardware bypass NIC interface

DEPLOYMENT OPTIONS

Shown here are the most popular deployment options, with no changes to applications or networks

PERFORMANCE – CLOUD/VIRTUAL WAF

Model	WAF (C)V1000B	WAF (C)V500B	WAF (C)V200B	WAF (C)V100B	WAF (C)V50B
Application Layer Throughput	1 Gbps	500 Mbps	200 Mbps	100 Mbps	50 Mbps

PERFORMANCE – HARDWARE

Model	WAF 6000	WAF 2020	WAF 1600	WAF 1000
Application Layer Throughput	10 Gbps	6 Gbps	3 Gbps	1 Gbps
HTTP Transactions/sec (TPS)	180,000 TPS	110,000 TPS	55,000 TPS	30,000 TPS
