NSFOCUS

NSFOCUS MSS

NSFOCUS MANAGED SECURITY SERVICES

OVERVIEW

When it comes to the increasing cyber security threats and heavy cyber security investment, on-premises security equipment and protection in the cloud seem not enough for Internet Data Centers whose clients need granular security services, and also small and medium-sized enterprises with a limited budget to hire skilled people and build a security team.

Cost-effective professional expertise and safety operations delivered by managed security service (MSS) providers have become a good choice for both of them.

Backed by 22 years of experience and research in network security, NSFOCUS has the capability of delivering unmatched services to our customers all around the world. Our extensive service portfolio is perfect for any customer needs and provides your business with the most efficient cloud security service.

NSFOCUS's MSS will fully maximize your business in a secure network environment and make you aware of network status with a unique user portal at any time.

MATCH YOUR NEEDS WITH OUR SERVICES

A diversified portfolio of services allows you to choose the right managed service for your business. Let us know your business and needs, and we will give you a tailored portfolio to meet your goal.

Flexible services are provided as your business evolves. A Technical Account Manager (TAM), who fully understands your business and requirements, keeps in close touch with you as a single point of contact of the experienced NSFOCUS SOC team, listens to your current needs and feedback, and holds regular business review meetings to ensure good protection and high-quality delivery through constantly adapted protection strategies and policies for your business.

KEY FEATURES

Cost Effective - High-quality services at a lower OPEX

Responsive Team – 24/7/365 services

TAM - Experienced, skilled and always there for you

Flexible and Easy to Tune – Service evolves as your business does

SLA Guaranteed - Guaranteed by Service Level Agreement

RESPONSIVE AND INTELLIGENT

When a DDoS attack is carried out, NSFOCUS's experts skilled in security protection will deal with it quickly and timely. You don't need to do anything but concentrate on growing your business.

NSFOCUS Threat Intelligence (NTI) is also available in some service packages. You can choose to use it for proactive protection as your business demands.

REAL-TIME MONITORING AND REPORTS

With NSFOCUS's Managed Security Services, you have access to a unique customer portal where you can monitor your traffic data and network status anytime – even though you don't have to do that as you are safeguarded by NSFOCUS's MSS.

There are multiple pre-defined report templates with categorized information and advisable comments. These reports help you quickly get a general picture of your network security condition and the protection effectiveness of detailed events. Advanced reports also can be provided regularly to meet advanced requirements on reports, according to service agreements.

FLEXIBLE COMBINATION WITH NSFOCUS CLOUD SECURITY SERVICES

The NSFOCUS Cloud Security Services is a suite of comprehensive protection capabilities. It contains two major function modules：

*   **NSFOCUS Cloud Web Application and API Protection (WAAP)**: a cloud-based web application protection combined with web application firewall (WAF), bot management, API protection and distributed denial-of-service (DDoS) protection. NSFOCUS Cloud WAAP provides all-around web protection with low investment but high returns.

*   **NSFOCUS Cloud DDoS Protection (CLOUD DPS)**: a cloud-based service that provides flexible global capability to mitigate distributed denial-of-service (DDoS) attacks and ensures customers' business stays as stable as possible during attacks.

NSFOCUS offers MSS for both Cloud WAAP and Cloud DPS services as customers' demands, together with different levels of SLA (service level agreement) to select.
