

# Next-Generation Firewall

## Multi-Layered Comprehensive Security Solution

### OVERVIEW

As the digital attack surface grows, both the volume and sophistication of cyberattacks increase. The resulting data theft and network disruptions can both threaten your reputation and business, a comprehensive security solution is an absolute necessity in every IT infrastructure.

**NFNX3-HDB1080**

NSFOCUS delivers fully integrated Next Generation Firewall (NGFW) to combat these emerging threats while reducing complexities and increasing operational efficiencies, which includes powerful security features such as firewall, IPS, DLP, Antivirus, Application Control, VPN service, and URL Filtering to combat cyberattacks and threats.

With the new hardware and software architecture, NSFOCUS NGFW uses intelligent technologies in security solutions to block known and unknown cyber attacks accurately. It tracks the real-time state of network sessions, maintains deep subscriber and application awareness, and uniquely mitigates attacks based on more granular details than traditional firewalls. Leveraging the enhanced performance provided by its dedicated product architecture, NSFOCUS NGFW delivers a high-performance engine carrying out strong capabilities of IPS, and Antivirus without impacting the network traffic.

### FEATURES

#### High-performance software and hardware platforms

- » The firewall series uses advanced 64-bit (MIPS) multi-core processors and caches.

#### Attack protection

- » Detects and prevents various attacks, including Land, Smurf, Fraggle, ping of death, Tear Drop, IP spoofing, IP fragment, ARP spoofing, reverse ARP lookup, invalid TCP flag, large ICMP packet, IP/port scanning, and common DDoS attacks such as SYN flood, UDP flood, DNS flood, and ICMP flood.

#### SOP 1:N virtualization

- » Uses container-based virtualization technology. An NSFOCUS firewall can be virtualized into multiple logical firewalls, which have the same features as the physical firewall. Each virtual firewall can have its own security policy and can be managed independently.

#### Security zone

- » Allows you to configure security zones based on interfaces and VLANs.

#### Packet filtering

- » Allows you to apply standard or advanced ACLs between security zones to filter packets based on information contained in the packets, such as UDP and TCP port numbers. You can also configure time ranges during which packet filtering will be performed.

### KEY FEATURES

#### Data leakage prevention (DLP)

Supports email filtering by SMTP mail address, subject, attachment, and content, HTTP URL and content filtering, FTP file filtering, and application layer filtering (including Java/ActiveX blocking and SQL injection attack prevention).

#### Intrusion prevention system (IPS)

Supports real-time active interception of DDoS, brute force disassembly, port scanning, sniffing, worms and other network attacks or malicious traffic, and protects internal network information from infringement.

#### Anti-virus (AV)

Uses a high-performance virus detection engine and a daily updated virus signature database to prevent attacks from over 5 million viruses.

#### Deep Visibility

Get insight into applications, users, and devices across the attack surface.

**Access control**

- » Supports access control based on users and applications and integrates deep intrusion prevention with access control.

**ASFP**

- » Dynamically determines whether to forward or drop a packet by checking its application layer protocol information and state. ASFP supports inspecting FTP, HTTP, SMTP, RTSP, and other TCP/UDP based application layer protocols

**AAA**

- » Supports authentication based on RADIUS/HWTACACS+, CHAP, and PAP.

**Blacklist**

- » Supports static blacklist and dynamic blacklist.

**NAT and VRF-aware NAT****VPN**

- » Supports L2TP, IPsec/IKE, GRE, and SSL VPNs. Allows smart devices to connect to the VPNs.

**Routing**

- » Supports static routing, RIP, OSPF, BGP, routing policies, and application- and URL-based policy-based routing.

**Security logs**

- » Supports operation logs, zone pair policy matching logs, attack protection logs, DS-LITE logs, and NAT444 logs.

**Traffic monitoring, statistics, and management**

- » Supports static routing, RIP, OSPF, BGP, routing policies, and application- and URL-based policy-based routing

**Integrated security service processing platform**

- » Highly integrates the basic and advanced security protection measures to a security platform.

**Application layer traffic identification and management.**

- » Uses the state machine and traffic exchange inspection technologies to detect traffic of P2P, IM, network game, stock, network video, and network multi-media applications.
- » Uses the deep inspection technology to identify P2P traffic precisely and provides multiple policies to control and manage the P2P traffic flexibly.

**Highly precise and effective intrusion inspection engine**

- » Uses the Full Inspection with Rigorous State Test (FIRST) engine and various intrusion inspection technologies to implement highly precise inspection of intrusions based on application states. The FIRST engine also supports software and hardware concurrent inspections to improve inspection efficiency.

**Realtime virus protection**

- » Uses the stream-based antivirus engine to prevent, detect, and remove malicious code from network traffic.

**Categorized filtering of massive URLs**

- » Uses the local & cloud mode to provide 139 categorized and 130 million URL libraries, and supports over 20 million URL filtering rules. Provides basic URL filtering blacklist and whitelist and allows you to query the URL category filtering server online.

**NFNX3-HDB3080**

**Complete and updated security signature database**

- » NSFOCUS has a senior signature database team and world-class security labs that can provide a precise and up-to-date signature database.

**Integrated link load balancing feature**

- » Uses link state inspection and link busy detection technologies, and applies to a network egress to balance traffic among links.

**Integrated SSL VPN feature**

- » Uses USB-Key and the enterprise's existing authentication system to authenticate users, providing secure access for mobile users to the enterprise network.

**Intelligent management**

- » Intelligent security policy management—Detects duplicate policies, optimizes policy matching rules, and detects and proposes security policies dynamically generated in the internal network.
- » SNMPv3—Compatible with SNMPv1 and SNMPv2.
- » CLI-based configuration and management.
- » Web-based management, with simple, user-friendly GUI
- » IMC SSM unified management—Collects and analyzes security information and offers an intuitive view into network and security conditions, saving management efforts and improving management efficiency.
- » Centralized log management based on advanced data drill-down and analysis technology—Requests and receives information to generate logs, compiles different types of logs (such as syslog and binary stream logs) in the same format, and compresses and stores large amounts of logs. You can encrypt and export saved logs to external storage devices such as DAS, NAS, and SAN to avoid the loss of important security logs.
- » Abundant reports—Include application-based reports and stream-based analysis reports.
- » Various exported report formats—Include PDF, HTML, word, and txt.
- » Report customization through the Web interface—Customizable contents include time range, data source device, generation period, and export format.

**Hardware Specification**

Model	NFX3-HDB680	NFX3-HDB1080	NFX3-HDB1180
<b>Dimensions (W*D*H)</b>	330mm*230mm*43.6mm Desktop	435mm*440mm*44.2mm 1RU	435mm*440mm*44.2mm 1RU
